                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             g
                                                                                                                                                                                                                                                     New peptides are disclosed which are designated "protegrins". The peptides are useful as antibacterial, antiviral and antifungal agents in both animals and plants. The peptides are 16-18 amino acids in length and are characterised by four invariant Cys residues at positions 6, 8, 13 and 15 and either (1) by a characteristic pattern of basic and hydrophobic amino acids and/or (2) being isolatable from animal (e.g. cys residues is/are replaced by hydrophobic or small amino acids. The peptides can be produced synthetically and some can be produced combinantly or can be isolated and purified from their native sources. The peptides can be modified by N-acylation and/or C-terminal amidation or esterification, and can be in linear or cystine-bridged form. D-Amino Carlo C

New peptides are disclosed which are designated "protegrins". The peptides are useful as antibacterial, antiviral and antifungal agents in both animals and plants. The peptides are 16-18 amino acids in length and are characterised by four invariant Cys residues at positions 6, 8, 13 and 15 and either (1) by a characteristic pattern of basic and hydrophobic amino acids and/or (2) being isolatable from animal (e.g., cys residues is/are replaced by hydrophobic or small amino acids. The peptides can be produced synthetically and some can be produced recombinantly or can be isolated and purified from their native sources. The peptides can be modified by N-acylation and/or C-terminal amidation or esterification, and can be in linear or cystine-bridged form. D-Amino and research.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  present sequence is a specific example of the protegrin logues in which Cys(6, 8, 13, 15) have all been replaced by Ser.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  This sequence represents the Thermomicrobium roseum (ATCC 27502)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Pure thermostable DNA polymerase providing high fidelity DNA
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Indels

                    5' proof
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     New peptides are disclosed which are designated "protegrins". The peptides are useful as antibacterial, antiviral and antifungal agents in beth animals and plants. The peptides are 16-18 amino acids in length and are characterised by four invariant Cys residues at positions 6, 8, 13 and 15 and either (1) by a characteristic pattern of basic and hydrophobic amino acids and/or (2) being isolatable from animal (e.g. portine) leukocytes; or analogues of these peptides in which 1-4 of the Cys residues is/are replaced by hydrophobic or small amino acids. The peptides can be produced synthetically and some can be produced recombinantly or can be isolated and purified from their native sources. The peptides can be modified by N-acytation and/or C-terminal amidation or esterification, and can be in linear or cystine-bridged form. D-Amino
thermostable DNA polymerase I of the invention. The polymerase is useful in the polymerase chain reaction (PCR). The polymerase has 3' to 5' prooreading activity and therefore provides high fidelity amplification.
                                                                                                                                         Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Antiblotic peptide-based cpds, designated protegrin(s) - are useful for treating and preventing viral and microbial infections and as preservatives

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  This peptide represents a linear derivative of the protegrin family of peptide antibiotics. Protegrin antibiotics form part of the peptide antibiotic family which contain a beta-sheet secondary structure linked by disulphide bridges. The new derivatives are linear and lack the disulphide bridge. The novel derivatives are used to deliver active agents to an organism, e.g. therapeutic proteins, antibodies (or their fragments), nucleic acid, oligonucleotides, ribozymes, antitumour agents, antivirals and anti-inflammatories, etc. The derivatives are non-toxic and ono-lytic but can cross mammalian cell membranes rapidly by a passive mechanism, so can deliver active agents to cytoplasm and nucleus, including crossing the blood-brain barrier.

studying drug behaviour in BBB models.

```
The invention relates to the use of linear peptides, coupled to an active agent, to prepare a composition able the cross the blood-brain barrier for diagnosis or treatment of disorders localised in the central nervous system. The linear peptide preferably has the formula: (a) X1- X16; (b); BXXBXXXXBBXBXXXXBBXB, where: each of X1-X16 are amino acids (aa), of which 6-10 of them are hydrophobic and X6 must be Trp; each B is an acontaining a side chain that includes a basic group; be Trp; each B is an acontaining a side chain that includes a basic group; card each X is an aliphatic or aromatic as. The linear peptide may be retro forms of (a)-(c) containing D = and/or 1-form aa, or a fragment containing at least 5, preferably at least 7 consecutive as from (a)-(c). Peptides able to cross the BBB include protegrins, Antennapedia, tachyplesins, transportan, etc. Of these several families have cytolytic effects and are termed peptide antibiotics. They fall into 3 main categories based on their structure: (i) peptides with alpha-helices, e.g. corropins and maganins; (ii) peptides with alpha-helices, with no major structure but containing bends due to the presence of the normal are actericins and PR39. The peptides of the invention fall into the peptide antibiotic categories defined above: (a)-peptides are based on the Antennapedia family peptides; (b)-peptides are based on the based on tachyplesins; this and based on tachyplesins, the passed on the presence of protegrins; and (c)-peptides are based on the based on the antibiotic categories defined above: (a)-peptides
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 The invention relates to the use of linear peptides, coupled to an active
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           protegrins, and (c)-peptides are based on tachyplesins. This sequence represents a synthetic linear peptide designed on peptides able to cross the BBB and is conjugated to a doxorubicin molecule by a succinate linker. The peptide may also be linked to a benzylpenicillin molecule
                                                                                                                                                                                                                                   neurodegenerative; antidepressant; analgesic; antimicrobial;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Conjugates of the linear peptides and the active agent are particularly used to treat, prevent or diagnose brain cancer, Alzheimer's or Parkinson's diseases, depression, pain and meningitis, but also for
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      for

agent, to prepare a composition able the cross the blood-brain barrier for diagnosis or treatment of disorders localised in the central nervous system. The linear peptide preferably has the formula: (a) X1- X16; (b); BXXBXXXXBBXBXXXXXBBXBB, where: each of X1-X16 are amino acids (aa), of which 6-10 of them are hydrophobic and X6 must be Trp; each B is an containing a side chain that includes a basic group; and each X is an aliphatic or aromatic an The linear peptide may be retro forms of (a)-(c) containing at least 5, preferably at least 7 consecutive as from (a)-(c). Containing at least 5, preferably at least 7 consecutive as from (a)-(c). Containing at least 6 peptides able to cross the BBB include protegrins, Antennapedia, categories absed on their structure: (i) peptides with alpha-halices, e.g. cecropins and maganins; (ii) peptides with disulphide bond-linked beta-sheets, e.g. protegrin, tackplbesins, (iii) peptides with no major structure but containing bends due to the presence of
                                                                                ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      The invention relates to the use of linear peptides, coupled to an active

Pro residues, e.g. bactericins and PR39. The peptides of the invention fall into the peptide antibiotic categories defined above: (a)-peptides are based on the Antennapedia family peptides; (b)-peptides are based on protegrins; and (c)-peptides are based on tachyplesins. This sequence represents a synthetic linear peptide designed on peptides able to cross the BBB and is conjugated to a dalargin molecule by a disulphide linker. Conjugates of the linear peptides and the active agent are particularly used to treat, prevent or diagnose brain cancer, Alzheimer's or parkinson's diseases, depression, pain and meningitis, but also for studying drug behaviour in BBB models.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                The specification describes a pharmaceutical composition, which comprises at least one anticancer agent associated with at least one peptide that can transport it into cancer cells and which inhibits development of resistance to the anticancer agent. By using the peptide as a vector for delivery of the anticancer agent, mechanisms that cause cancer cells to become resistant to the agent, methanisms the P-glycoprotein pump, are avoided. Also, peptides are easily produced by chemical synthesis, can be coupled easily to the agent, cross mammalian cell membranes rapidly by a passive mechanism (no receptors required), and are non-toxic and non-lytic. The compositions are used to treat cancer. The present sequence represents a peptide which may be linked to the anticancer agents of the invention.
                                                                                                                                                                                                                                                                                                                Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        New composition useful for cancer treatment and prevention, contains anticancer agent and peptide vector that transports agent into cells

The ORFX sequences have activities such as: cytostatic; hepatotropic; vulnerary; antiperiatic; antipartinsonian; nootropic; neuroprotective; osteopathic; anticonvulsant; antiarthritic; immunosuppressant; immunosuppressant; antidatabetic; hypotenaive; dermatological; immunosuppressive; antidiabetic; hypotenaive; dermatological; immunosuppressive; antithyroid; and antianaemic. The sequences can be used for determining the presence of or predisposition to, or preventing or treating pathological conditions associated with an ORFX-associated disorder. The nucleic acids can be used to express ORFX proteins in gene therapy vectors. The proteins and nucleic acids may be used to treat cancers,

```
New isolated polypeptides, used for treating e.g. neurodegenerative disease or disorder, neuronal damage or neuronal disorder of the disease or disorder, neuronal damage or neuronal disorder of the preparation of the ginal cord - the peripheral nervous system, the medulla or the spinal cord - the present sequence represents a neurotrophic factor sub-class of the transforming growth factor-beta corporation factor sub-class of the transforming growth factor-beta superfamily of neurotrophic factors. The polypeptides can be used cor the GRR-alpha3.RET receptor complex. The polypeptides can be used for treating a neurodegenerative disease or disorder, cerebral ischemic computant damage, tranmatic brain injury, peripheral neuropathy. Alzheimer's disease, Huntington's disease, Parkinson's disease, Parkinson's disease, Parkinson's memory computance of the peripheral nervous system, anyotrophic lateral sclerosis, memory impairment, or a neuronal disorder of the peripheral nervous system, the medulla or the spinal cord injury, nervous system tumours, coute brain injury, acute spinal cord injury, nervous system tumours, multiple sclerosis, exposure to neurotoxins, metabolic diseases such as classed or various disorders in the eye.

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Description

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Nypothetical protein (gene N internal ORF) - bovine coronavirus (strain F15)
N/Alternate names: 1078 protein
C;Species: bovine coronavirus
C;Date: 17-Jul-1998 #sequence_revision 17-Jul-1998 #text_change 16-Jul-1999
C;Accession: 806869
B;Cruciere, C.; Laporte, J.
Ann. Inst. Pasteur Virol. i39, 123-138, 1988
A;Title: Sequence and analysis of bovine enteritic coronavirus (F15) genome. I. - Sequence number: 806399; MUID: 89087718
A;Reference number: 806869
A;Molecule type: genomic RNA
A;Residues: 1-207 <CRU>
A;Cross-references: EMBL:M36656; NID:g210700; PIDN:AAA42759.1; PID:g210702
A;Cross-references: Brabi:M36656; NiD:g210700; PIDN:AAA42759.1; PID:g210702
A;Note: the source is designated as bovine enteritic coronavirus
C;Comment: The gene encoding this protein is located within the nucleocapsid (N) gene.
C;Superfamily: coronavirus gene N internal ORF
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           A57261
probable transposase - Rhizobium meliloti insertion sequence ISRm5

L2 protein - human papillomavirus type 34
C;Species: human papillomavirus type 34
C;Date: 20-Feb-1995 #sequence_revision 20-Feb-1995 #text_change 26-Aug-1999
                                                                                 C. Accession: S36519
R. Delius, H.; Hofmann, B.
submitted to the EMBL Data Library, August 1993
A. Description: Primer-directed sequencing of human papillomavirus types.
A. Reference number: S3646
A. Molecule type: DNA
A. Residues: 1-472 < DEL>
A. Residues: 1-472 < DEL>
C. Superfamily: papillomavirus L2 protein
C. Superfamily: papillomavirus L2 protein
C. Keywords: late protein
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           3;

-!- CATALYTIC ACTIVITY: (6S)-TETRAHYDROFOLATE +
S-AMINOMETHYLDIHYDROLIPOYLPROTEIN = (6R)-5,10-
METHYLENETRAHYDROFOLATE + NH(3) + DIHYDROLIPOYLPROTEIN.

-!- SUBUNT: THE GLYCINE CLEAVAGE SYSTEM IS COMPOSED OF FOUR PROTEINS:
P, T, L, AND H (BY SIMILARITY).

-!- SIMILARITY: BELONGS TO THE GCVT FAMILY.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Gaps

"Identification and characterization of a thermostable MutS homolog from Thermus aquaticus."
If Inom Thermus aquaticus."
1. Biol. Chem. 271:5040-5048(1996).
-I. FUNCTION: THIS PROTEIN IS INVOLVED IN THE REPAIR OF MISMATCHES IN DNA. IT IS POSSIBLE THAT IT CARRY OUT THE MISMATCH RECOGNITION STEP. THIS PROTEIN HAS A WEAK ATPASE ACTIVITY.
-I. SIMILARITY: BELONGS TO THE DNA MISMATCH REPAIR MUTS FAMILY.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Gaps

                                                                                                                                                                                                                                                     disulphide bridge. The novel derivatives are used to deliver active agents to an organism, e.g. therapeutic proteins, antibodies (or their fragments), nucleic acid, oligonuclectides, ribozymes, antitumour agents, antivirals and anti-inflammatories, etc. The derivatives are non-toxic and non-lytic but can cross mammalian cell membranes rapidly by a passive mechanism, so can deliver active agents to cytoplasm and nucleus, including crossing the blood-brain barrier.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        This peptide represents a linear derivative of the protegrin family of peptide antibiotics. Protegrin antibiotics form part of the peptide antibiotic family which contain a beta-sheet secondary structure linked by disulphide bridges. The new derivatives are linear and lack the disulphide bridge. The newel derivatives are used to deliver active agents to an organism. e.g. therapeutic proteins, antibodies (or their fragments), nucleic acid, oligonuclectides, ribozymes, antitumour agents, antivirals and anti-inflammatories, etc. The derivatives are non-toxic and non-lytic but can cross mammalian cell membranes rapidly by a passive including crossing the blood-brain barrier.

The peptides are 16-18 amino acids in length and are characterised by four invariant Cys residues at positions 6, 8, 13 and 15 and either (1) by a characteristic pattern of basic and hydrophobic amino acids and/or (2) being isolatable from animal (e.g. porcine) leukocytes; or analogues of these peptides in which 1-4 of the Cys residues is/are replaced by hydrophobic or small amino acids. The
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        peptides can be produced synthetically and some can be produced recombinantly or can be isolated and purified from their native sources. The peptides can be modified by N-acylation and/or C-terminal amidation or esterification, and can be in linear or cystine-bridged form. D-Amino acid residues can be present.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              The present sequence is a specific example of the protegrin analogues in which Cys(6, 8, 13, 15) have all been replaced by Ser.
Antibiotic peptide-based cpds. designated protegrin(s) - are useful for treating and preventing viral and microbial infections and as preservatives \frac{1}{2} \int_{-\infty}^{\infty} \frac{1}{2} \int_{-\infty}^

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Sequence
```

```
The specification describes a pharmaceutical composition, which comprises at least one anticancer agent associated with at least one peptide that can transport it into cancer cells and which inhibits development of resistance to the anticancer agent. By using the peptide as a vector for delivery of the anticancer agent, mechanisms that cause cancer cells to become resistant to the agent, methanisms the P-glycoprotein pump, are avoided. Also, peptides are easily produced by chemical synthesis, can be coupled easily to the agent, cross mammalian cell membranes rapidly by a passive mechanism (no receptors required), and are non-toxic and non-lytic. The compositions are used to treat cancer. The present sequence repersents a peptide which may be linked to the anticancer agents of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Human; nootropic; immunosuppressant; cytostatic; gene therapy; cancer; peripheral nervous system; neuropathy; central nervous system; CNS; Alzheimer's; Parkinson's disease; Huntington's disease; haemostatic; amyotrophic lateral sclerosls; Shy-Drager Syndrome; chemotactic; chemokinetic; thrombolytic; drug screening; arthritis; inflammation;
                                                                                                                                                                                                                                                                                                                                                                                                                                               New composition useful for cancer treatment and prevention, contains anticancer agent and peptide vector that transports agent into cells

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         peptide antibiotics. Protegin antibiotics form part of the peptide antibiotics. Protegin antibiotics form part of the peptide by disulphide bridges. The new derivatives are linear and lack the disulphide bridge. The newel derivatives are used to deliver active agents to an organism, e.g. therapeutic proteins, antibodies (or their fragments), nucleic acid, oligonucleotides, ribozymes, antitumour agents antivirals and anti-inflammatories, etc. The derivatives are non-toxic mechanism, so can deliver active agents to cytoplasm and non-liver active agents to cytoplasm and nucleus, including crossing the blood-brain barrier.
                                                                                                                                                                                                                                                                                                       Linear; protegrin; peptide antibiotic; beta-sheet; secondary structure; disulphide bridge; antibody; ribozyme; antitumour agent; antiviral; anti-inflammatory; mammal; cell membrane; passive transport; cytoplasm; nucleus; blood-brain barrier.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            peptide represents a linear derivative of the protegrin family of

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     7-JUN-
The invention relates to human nucleic acids (AAI57798-AAI61369) and the encoded polypeptides (AAM38642-AAM42213) with nootropic, immunosuppressant and cytostatic activity. The polypucleotides are useful in gene therapy. A composition containing a polypeptide or polynucleotide of the invention may be used to treat diseases of the peripheral nervous system diseases, such as system, such as peripheral nervous injuries, peripheral neuropathy and localised neuropathies and central nervous system diseases, such as Alzheimer's, Parkinson's disease, Huntington's disease, amyotrophic lateral sclerosis, and Shy-Drager Syndrome. Other uses include the utilisation of the activity, chemotectic/chemokinetic activity, haemostatic and thrombolytic activity, chemotectic/chemokinetic activity, haemostatic and thrombolytic activity, arthritis and inflammation, leukaemias and c. N. S disorders.

AMY68769-95 and AAY68797-99 represent human phosphorylation effectors (PHSP), designated PHSP1-PHSP31 (the protein sequence for PHSP28 is not given in the specification). The sequences were isolated from cDNA libraries prepared from various human tissues. The PHSP proteins are useful for the diagnosis, treatment and prevention of proliferative disorders, immune disorders and neuronal disorders. The PHSP proteins form pharmaceutical compositions which useful for treating or preventing disorders associated with decreased PHSP expression/activity. PHSP antagonists are useful for treating or preventing with increased PHSP expression/activity.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                New human phosphorylation effectors useful for the diagnosis, treatment and prevention of proliferative, immune and neuronal disorders
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Lal P, Tang YT, Corley NC, Guegler KJ, Baughn MR;

This sequence is an example of a cyclic peptides (I) of the invention, which has: (a) an amphipathic anti-parallel beta-sheet region (SR), a loop region (LR) and a beta-turn region (TR); (b) a net positive charge at physiological pH; and (c) at least one basic amino acid (aa) in LR or TR. (I) are broad spectrum antimicrobials, specifically for use against E. coli, Pseudomonas aeruqinosa, methicilin-resistant Staphylococcus quireus (MRSA), vancomycin-resistant Enterococcus faecium and penicillin-resistant Streptococcus pneumoniae. More generally they are protozoa. Apart from clinical uses, (I) are also used as disinfectants protozoa. Apart from clinical uses, (I) are also used as disinfectants correstants for medical equipment, foods, cosmetics etc., also for treatment of plant diseases. Compared with non-cyclised analogues (i.e. tachyplesin and protegrin type peptides), (I) and are more effective, (ii) better bioavailability and/or serum half-life (increased resistance to protecolysis). They are more sultable for oral administration, can be used at lower doses and are unlikely to induce development of resistant
                                                                                                                                                                  Loop region; cyclic peptide; antimicrobial; disinfectant; therapy; preservative; amphipathic anti-parallel beta-sheet region; plant disease.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            New cyclic peptide(s) with antimicrobial activity - contain amphipathic beta-sheet, loop and beta-turn regions, have better activity, bio:availability and protease resistance than linear
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Length 13;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         5

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              The present sequence is the soybean glutamyl-tRNA synthetase. This enzyme is an aminoacyl-tRNA synthetase (AARS). AARSs charge (acylate) specific tRNAS with amino acids for use in protein synthesis. Glutamyl-tRNA synthetase therefore charges an glutamyl-tRNA with glutamate. Since this enzyme has a crucial role in protein synthesis and therefore life, any agent that inhibits or disrupts protein synthesis is likely to be toxic. The present sequence could therefore be used as a basis for testing whether the encoded aminoacyl-tRNA synthetase is sensitive to known inhibitors or other chemicals and hence could be used in the discovery of potential herbicides.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Gaps

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               ò
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   which has: (a) an amphipathic anti-parallel beta-sheet region (SR), a loop region (LR) and a beta-turn region (TR); (b) a net positive charge at thy sloop dral pti and (c) at least one basic aminon acid (aa) in LR or TR. (I) are broad spectrum antimicrobials, specifically for use against E. coli, Pseudomonas aeruginosa, methicillin-resistant Staphylococcus aureus (MRSA), vancomycin-resistant Enterococcus faccium and penicillin-resistant Streptococcus pneumoniae. More generally they are active against Gram-positive or -negative bacteria, fungi, yeast and proservatives for medical equipment, foods, cosmetics etc., also for treatment of plant diseases. Compared with non-cyclised analogues (i.e. tachpolesin and protegrin type peptides), (I) and are more effective, with better bloavailability and/or serum half-life (increased resistance to protecolysis). They are more suitable for oral administration, can be used at lower doses and are unlikely to induce development of resistant
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                ö
           cyclic peptide; antimicrobial; disinfectant; therapy; amphipathic anti-parallel beta-sheet region; plant disease.

which has: (a) an amplipathic anti-parallel beta-sheet region (SR), a loop region (LR) and a beta-turn region (TR); (b) a net positive charge at physiological ph; and (c) at least one basic amino acid (aa) in LR or TR. (i) are broad spectrum antimicrobials, specifically for use against E. coli, Pseudomonas aeruginosa, methicillin-resistant Staphylococcus aureus (MRSA), vancomycin-resistant Enterococcus faecium and penicillin-resistant Streptococcus penicillin-resistant Streptococcus penicillin-resistant Streptococcus penicillin-resistant streptococcus active against Gram-positive or -negative bacteria, fungi, yeast and protozoa. Apart from Cilnical uses, (1) are also used as disinfectants and preservatives for medical equipment, foods, cosmetics etc., also for treatment of plant diseases. Compared with non-cyclised analogues (1.e.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         tachyplesin and protegrin type peptides), (I) and are more effective, with better bloavailability and/or serum half-life (increased resistance to proteolysis). They are more suitable for oral administration, can be used at lower doses and are unlikely to induce development of resistant
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          This sequence is an example of a cyclic peptides (I) of the invention,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           blocidal bacteria; yeast; Candida species; fungi; protozoa; Escherichia coli; Pseudomonas aeruqinosa; infection; preservative; vancomyclin-resistant Entercoccus faecium; disinfectant; food; methicillin-resistant Straphylococcus aureus; medical equipment; penicillin-resistant Straptococcus pneumoniae; cosmetic.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Cyclic peptide; antimicrobial; amphiphilic beta-sheet; biostatic;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              New cyclic peptide(s) with antimicrobial activity - contain amphipathic beta-sheet, loop and beta-turn regions, have better activity, bio:availability and protease resistance than linear

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         vancomycin-resistant Entercocous faccium, methicillin-resistant staphylococus aureus and penicillin-resistant Straphylococus aureus and penicillin-resistant Straphylococcus aureus and penicillin-resistant Straphococcus aureus and penicillin-resistant Straphococcus pneumoniae. (A) are used to tract or prevent infections, in animals or plants, also as preservatives and disinfectants for medical equipment, foods, cosmetics, optionally as mixtures or in combination with other antimicrobials. Compensated with linear analogues, (I) are more effective with better bloavailability and/or serum half-life (better resistance to proteolysis, allowing lower doses and making them more suitable for oral delivery). Since (I) are structurally related to naturally occurring antimicrobial peptides, they are less likely to induce development of resistant strains.
                                                                                                                                                                                                                                                                                                                                   The present invention describes cyclic peptides (I): (i) comprising an amphiphilic anti-parallel beta-sheet region (A), a loop region (B) and a beta-turn (C): (ii) having net positive charge at physiological pH; and (III) including at least one basic amino acid (aa) in (B) or (C). AAY09554 to AAY09683 and AAY17301 to AAY17385 represent specifically claimed cyclic peptides and peptide segments. (I) are broad-spectrum antimicrobials (biostatic or biooidal), effective against bacteria, yeast (e.g. Candida species), fungi and protozoa. Particularly they are used to control Escherichia coli, pseudomonas aeruginosa.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               biocidal; bacteria; yeast; Candida species; fungi; protozoa; biocidal; bacteria; yeast; Candida species; fungi; protozoa; Escherichia coli; Pseudomonas aeruginosa; infection; preservative; wancomyclin-resistant Entercoccus faecium; disinfectant; food; methicillin-resistant Staphylococcus aureus; medical equipment; penicillin-resistant Streptococcus pneumoniae; cosmetic.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            peptide; antimicrobial; amphiphilic beta-sheet; biostatic;
                                                                                                                                                                                                                                                         Antimicrobial cyclic peptides with amphiphilic beta-sheet region

The present invention describes cyclic peptides (I): (i) comprising an camphiphilic anti-parallel beta-sheet region (A), a loop region (B) and a beta-turn (C); (ii) having net positive charge at physiological pH; cand (iii) including at least one basic amino acid (aa) in (B) or (C). (AAY09554 to AAY09683 and AAY1301 to AAY17385 represent specifically claimed cyclic peptides and peptide segments. (I) are broad-spectrum artimicrobials (biostatic or biocidal), effective against bacteria, artimicrobials (biostatic or biocidal), effective against bacteria, cantimicrobials (biostatic or biocidal), effective against bacteria, are used to control Escherichia coli, Pseudomonas aeruginosa, are used to control Escherichia coli, Pseudomonas aeruginosa, are used to control acid terresistant Streptococcus (C) phants, also as preservatives and disinfectants for medical equipment, phants, also as preservatives and disinfectants for medical equipment, consmetter, or proteolysis, allowing lower doses and making them more suitable for coral delivery). Since (I) are structurally related to naturally coccurring antimicrobial peptides, they are less likely to induce corrections.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Gaps
                                                                                                                                                                               Antimicrobial cyclic peptides with amphiphilic beta-sheet region
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              ;
